# Problem Statement:

QATra is an advanced irrigation system that is able to reduce water consumption by checking the soil moisture and controlling the amount of water dispensed.

A mobile application, where the user can view the daily water content of the soil and gets notified when the plants are watered, is used in our system.

The user is informed in case of a fault in the system and can control the irrigation system using the application.

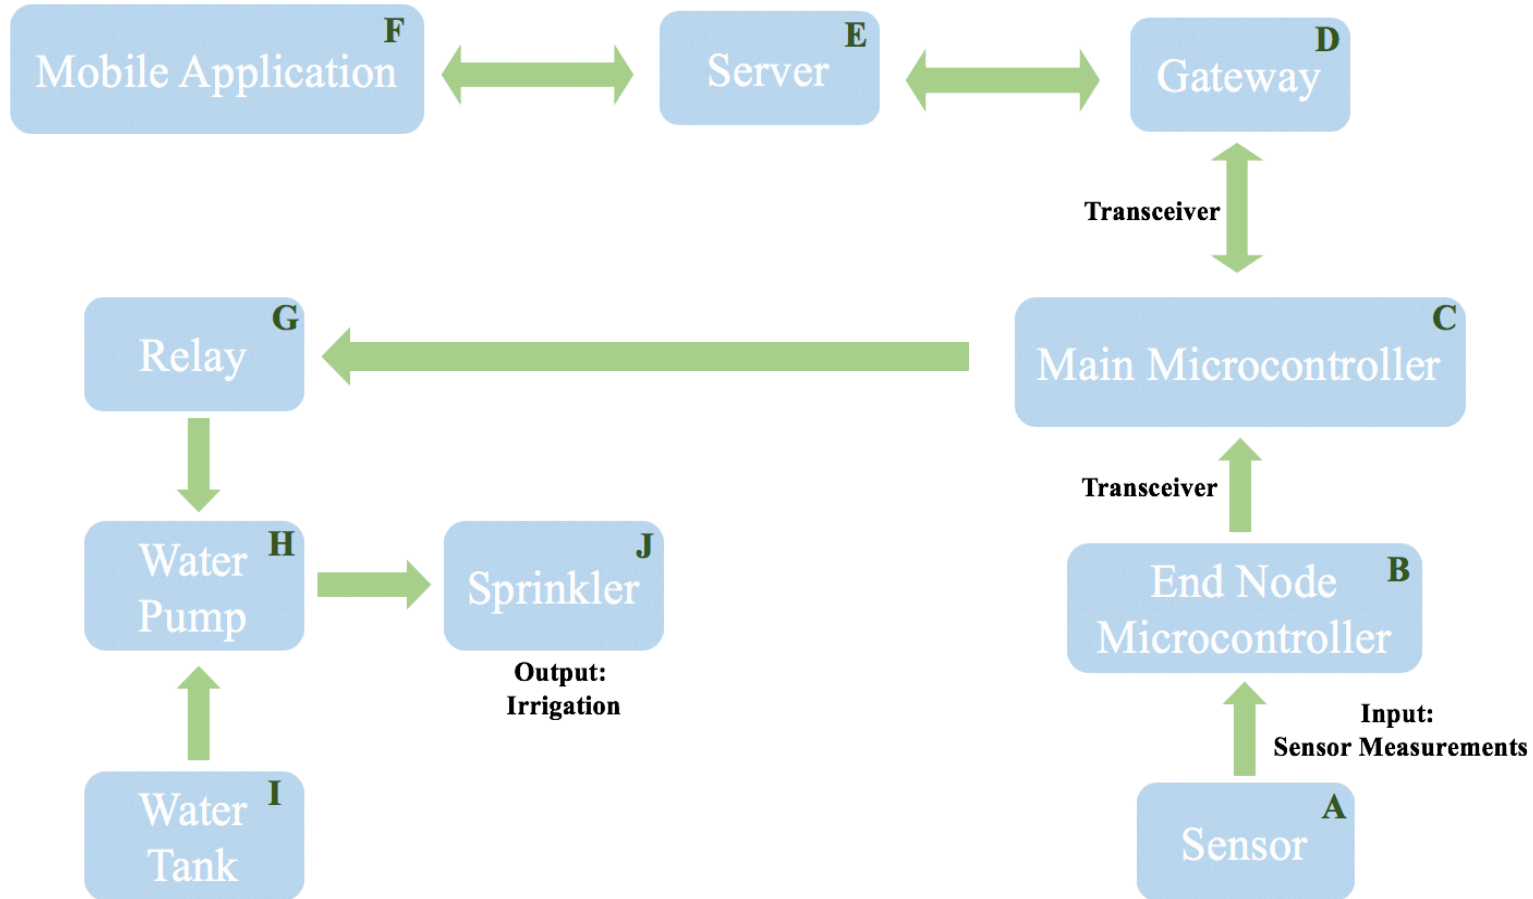

The project addresses environmental issues, cuts labor costs, encourages smart innovations and boosts cultivation.
